Running Ghana religion python programs on a MAC

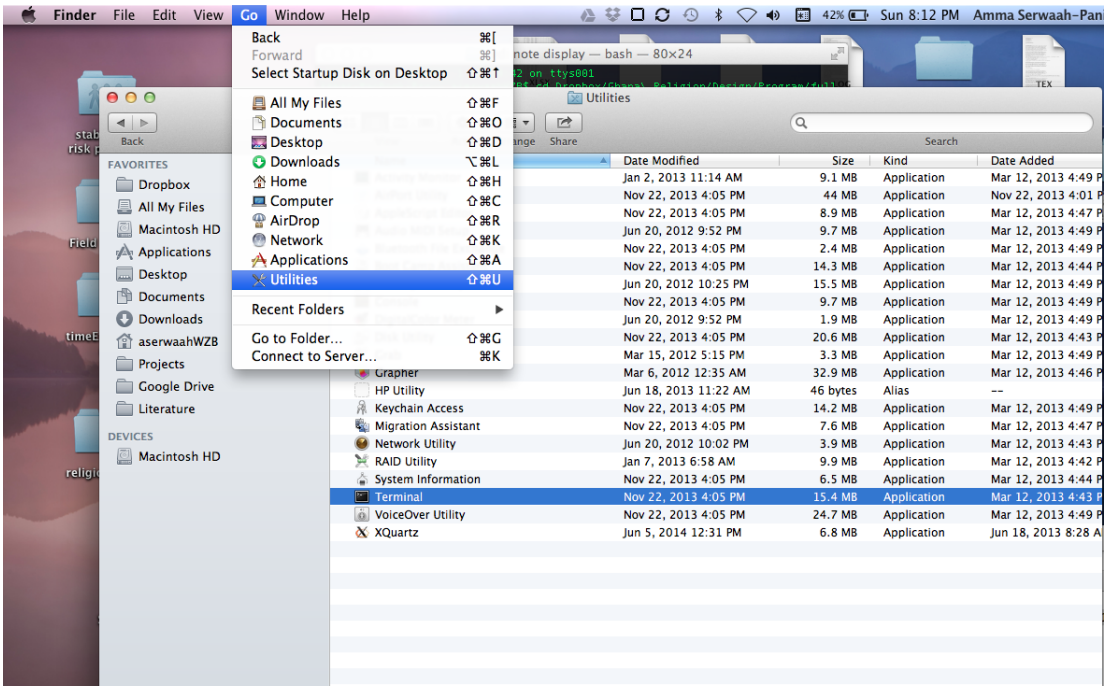
February 1, 2015

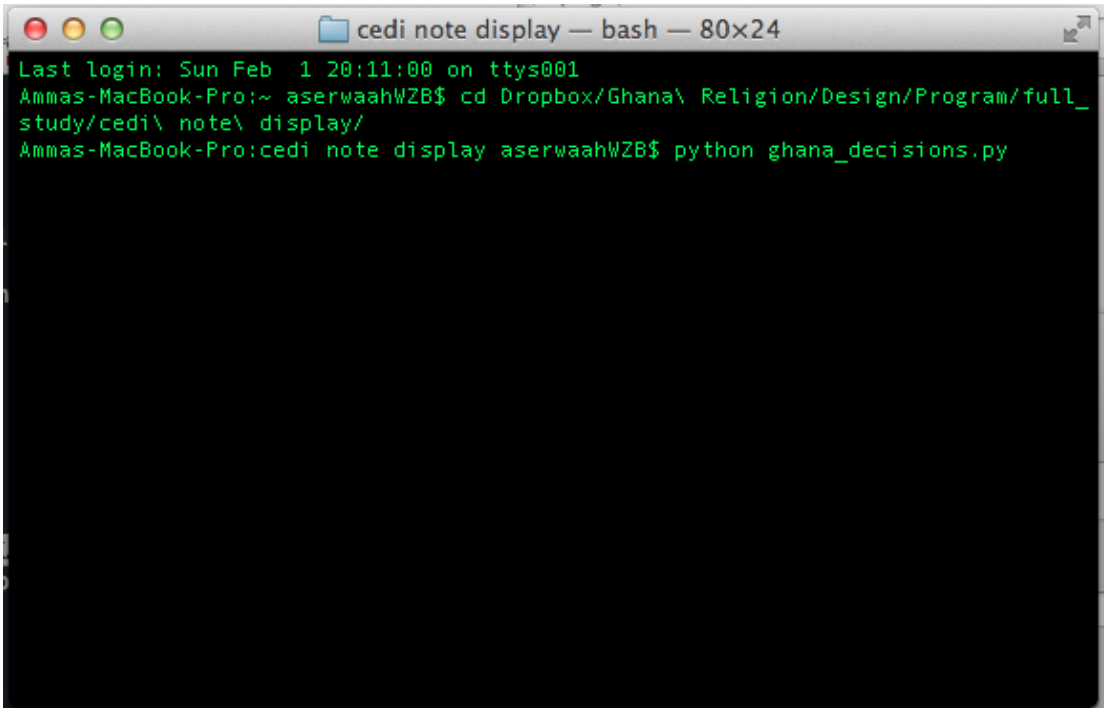
1. Open Terminal (from the Desktop select Go; Utilities; Terminal)
2. Change to the program directory (command *cd*) e.g.

   ```
   Computer:ComputerName$ cd Dropbox/Ghana\ Religion/ Design
   ```

3. Run program using command *python* followed by program name e.g.

   ```
   Computer:ComputerName$ python run_ghana.py
   ```





cedi note display — bash — 80×24
